

~~An image can be smoothly generated without delaying the~~  
release of a host by dynamically changing the priority of a task  
for writing to HD for the priority of another task. In other words,  
a situation that the release of a host thereby is delayed can be  
prevented, smoothly generating images for seven lines.

release of a host by dynamically changing the priority of a task for writing to HD for the priority of another task. In other words, a situation that the release of a host thereby is delayed can be prevented, smoothly generating images for seven lines.

a situation that the release of a host thereby is delayed can be prevented, smoothly generating images for seven lines.

~~prevented, smoothly generating images for seven lines.~~
